The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Menin et al. US Pub.

No. 2001/0047834 A1. Menin discloses an assembly with a gate valve and device for the circulation and distribution of fluid comprising such as assembly that comprises a first valve inlet tube 3 (see figure 1) defining and enclosing a first valve inlet cavity (see figure 1); a second valve inlet tube 3' (see figure 1) defining and enclosing a second valve inlet cavity (see figure 1); a valve outlet tube 2 (see figure 1) defining and enclosing an outlet cavity, the valve outlet tube 2 communicating with the first valve inlet tube and the second valve inlet tube; and a flap valve 4 (see figure 1) actuatable between a first position and a second position; wherein the second valve inlet cavity and the outlet cavity define a first flow path when the flap valve is in the first position, and the first valve inlet cavity and the outlet cavity define a second flow path when the flap valve is in the second position.

Referring to claim 2, Menin discloses an apparatus wherein the first valve inlet tube, the second valve inlet tube, and the valve outlet tube are coupled in a Y-shaped configuration (see figure 1).

Art Unit: 3743

Referring to claim 3, Menin discloses an apparatus wherein the flap valve sealably closes an opening between the first valve inlet cavity and the outlet cavity when the flap valve is in the first position (see figure 1).

Referring to claim 4, Menin discloses an apparatus wherein the flap valve sealably closes an opening between the second valve inlet cavity and the outlet cavity when the flap valve is in the second position (see figure 1).

Referring to claim 5, Menin discloses an apparatus that further comprises an actuator to actuate the flap valve between the first position and the second position (see figure 10).

Referring to claim 6, Menin discloses an apparatus wherein the actuator is selected from group consisting of a pneumatic actuator, an electric actuator, a mechanical actuator, and a magnetic actuator (see page 2 section 0029).

Allowable Subject Matter

Claims 7 through 33 are allowed.

Art Unit: 3743
